

PERMANON · USA™

INNOVATIVE SURFACE PROTECTION

COMMERCIAL

Unique Advantage Permanon Commercial

- › Brilliant shine without buffing or polishing
- › Insects, asphalt and carbon black are easily removed
- › UV protection for all protected surfaces
- › Up to 50% less time spent cleaning and polishing
- › Resists most acids, solvents and alkalis
- › Electrostatic bond repels airborne dust
- › No chemical reaction to damage surfaces
- › Non-toxic, non-flammable and biodegradable
- › Effective on interior and exterior surfaces
- › Temperature safe on surfaces up to 572°F/ 300°C

INNOVATIVE SURFACE PROTECTION

HIGH-TECH COATING

Permanon is a safe and simple-to-apply surface protection that produces brilliant shine on all solid surfaces. When applied, nano-engineered particles of Permanon Silicium (I4Si) electrostatically bond and fill microscopic pores and pits that naturally occur in solid materials. Permanon bridges and fills these pores and pits; making it hard for dirt to bond or embed.

Permanon Commercial is mixed with water to easily and safely apply a tough, high gloss coating to all solid surfaces. Permanon coatings allow you to reduce the number of cleaning products as well as allow you to use less harsh or hazardous alternatives. Correspondingly, you will need fewer hours of labor to clean treated versus untreated surfaces without compromising appearance or safety. By adding a Permanon coating, cleaning times can be reduced by as much as 50%.

Permanon Commercial and Cleaner 2&1 Revitalizer coatings are based on the elemental mineral Silicium I4Si, the main building block of glass. Other coatings are based on organic compounds such as waxes or polymers which are very sensitive to heat and sunlight and, because of this, rapidly fade away. The mineral Silicium I4Si is extremely resistant to all aggressive contaminants from pH1 to pH12 (most acids, alkalis, and solvents), heat, and sunlight. Keeping your protection from fading away is one of Permanon's greatest features. Furthermore, because Permanon's Silicium I4Si is water-based and electro-statically attaches to surfaces rather than chemically bonding, they can be easily and rapidly sprayed on to all types of surfaces; i.e. paint, glass, steel, plastic, alloys etc. without risk of damage or affecting re-painting. Bird droppings, tree saps, mineral deposits and other aggressive contaminants will easily rinse off of a Permanon protected surface.
