Hard & Fast Finishes

PERMANON·USA™
Hard & Fast Finishes

Unique Advantages Permanon Allround

- › Brilliant shine without buffing or polishing
- › UV protection
- › Up to a 50% reduction in time spent on cleaning and polishing
- › Resists most acids, solvents, and alkalis
- › Electrostatic bond repels airborne dust
- › No chemical reaction to damage surfaces
- › Non-toxic, non-flammable, and biodegradable
- › Apply to grout and tile for easy mold/mildew clean-up
- › Temperature safe on surfaces up to 470°F/ 300°C

HIGH-TECH COATING

Permanon is a safe and simple-to-apply surface protection that produces brilliant shine on all solid surfaces. When applied, nano-engineered particles of Permanon Silicium (Si_{14}) electrostatically bond and fill microscopic pores and pits that naturally occur in solid materials. Permanon bridges and fills these pores and pits; making it hard for dirt to bond or embed

Permanon Supershine is mixed with water to easily and safely apply a tough, high gloss coating to all solid surfaces. Permanon coatings allow you to reduce the number of cleaning products as well as allow you to use less harsh or hazardous alternatives. Correspondingly, you will need fewer hours of labor to clean treated versus untreated surfaces without compromising appearance or safety. By adding a Permanon coating, cleaning times can be reduced by as much as 50%.

Permanon Supershine and Cleaner 2&1 Revitalizer coatings are based on the elemental mineral Silicium Si_{14} , the main building block of glass. Other coatings are based on organic compounds such as waxes or polymers which are sensitive to heat and sunlight and, because of this, their protection fades away. The mineral Silicium Si_{14} is extremely resistant to all aggressive contaminants from pH1 to pH12.5, which include most acids, alkalis, and solvents and it also stands up to the rigors of commercial environments. As examples; organic deposits, cosmetics, lotions, and shoe polish are easily removed from Permanon protected surfaces. Permanon gives you the ability to control your labor costs and meet the most demanding customer expectations. Because Permanon Silicium Si_{14} is water-based and electro-statically attaches to surfaces rather than chemically bonding, it can be easily and rapidly sprayed on to all types of surfaces; i.e. paint, glass, steel, plastic, alloys etc. without risk of damage or affecting re-painting.
