

PERMANON·USA™

Innovative Surface Protection

PERMANON·USA™
Innovative Surface Protection

Unique Advantages Permanon Boat / Yacht

- › Brilliant shine without buffing or polishing
- › UV protection
- › Up to a 50% reduction in time spent on cleaning and polishing
- › Resists most acids, solvents, and alkalis
- › Electrostatic bond repels airborne dust
- › No chemical reaction with the surface
- › Non-toxic, non-flammable, and biodegradable
- › Sponge clean most marine growth and waterline scum
- › Temperature safe on surfaces up to 572°F/ 300°C

PERMANON·USA™

Innovative Surface Protection

HIGH-TECH COATING

Permanon is a safe and simple-to-apply surface protection that produces brilliant shine on all solid surfaces. When applied, nano-engineered particles of Permanon Silicium (Si_{14}) electrostatically bond and fill microscopic pores and pits that naturally occur in solid materials. Permanon bridges and fills these pores and pits; making it hard for dirt to bond or embed. Rather than spend your time waxing your boat or yacht, spend more of your time enjoying it.

Permanon Supershine and Cleaner 2&1 Revitalizer coatings are based on the elemental mineral Silicium Si_{14} , the main building block of glass. Other coatings are based on organic compounds such as waxes or polymers which are sensitive to heat and sunlight and, because of this, rapidly fade away. The mineral Silicium Si_{14} is extremely resistant to all aggressive contaminants from pH 1 to pH 12.5, which include most acids, alkalis, and solvents. It also stands up to the harsh marine environment of salts, UV, dissolved minerals, and organic growth. Because Permanon Silicium Si_{14} is water-based and electrostatically attaches to surfaces rather than chemically bonding, it can be easily and rapidly sprayed on to all types of surfaces; i.e. paint, glass, steel, plastic, alloys etc. without risk of damage or affecting re-painting. Bird droppings, tree resins, and other aggressive contaminants will easily rinse off of a Permanon protected surface

Gel-Coat, marine metals, and glass are all prone to scratching when cleaned aggressively. Permanon allows you to maintain brilliant surfaces with less effort, preserving your factory surfaces. Permanon is a spray on and micro-fiber dry application process; no power or hand buffing is needed to "set" the shine and no swirl marks ground into the surface to degrade your investment.
