

PERMANON·USA™

Innovative Surface Protection

PERMANON·USA™
Innovative Surface Protection

Unique Advantages Permanon Truck

- › Brilliant shine without buffing or polishing
- › Bird fouling and insect residue are easily removed
- › UV protection for all protected surfaces
- › Up to 50% less time spent cleaning and polishing
- › Resists most acids, solvents, and alkalis
- › Electrostatic bond repels airborne dust
- › No chemical reaction to damage surfaces
- › Non-toxic, non-flammable, and biodegradable
- › Effective on interior and exterior surfaces
- › Temperature safe on surfaces up to 572°F/ 300°C

PERMANON·USA™

Innovative Surface Protection

HIGH-TECH COATING

Permanon is a safe and simple-to-apply surface protection that produces a brilliant shine on all solid surfaces. When applied, nano-engineered particles of Permanon Silicon (Si_{14}) electro-statically bond and fill microscopic pores and pits that naturally occur in solid materials. Permanon bridges and fills the pores and pits; making it hard for dirt to bond or embed. Traditionally, to clean and protect your vehicle you would need to clean, rinse, dry, polish and wax... a multi-step, hours long process. By adding a Permanon coating, cleaning can now be done in as little as 20 minutes without the need to apply a polish / wax.

Permanon Supershine and Cleaner 2in1 Revitalizer coatings are based on the elemental mineral Silicon Si_{14} , the main building block of glass. Other coatings are based on organic compounds such as waxes or polymers which are sensitive to heat and sunlight and, because of this, fade away. The mineral Silicon Si_{14} is extremely resistant to all aggressive contaminants from pH1 to pH12.5 which includes most acids and solvents, as well as heat, and sunlight. Furthermore, because Permanon's Silicon Si_{14} is water-based and it electro-statically attaches to surfaces rather than chemically bonding, it can be easily and rapidly sprayed on to paint, glass, steel, plastic, alloys, etc. without risk of damage or affecting re-painting. Insects, tree sap, carbon fouling, fuel and oil residue, and other aggressive contaminants easily wipe off Permanon protected surfaces.

HARD AND FAST FINISHES

Break-dust burns at 270°C, hot enough to burn through any polymer or wax coating leaving yellow pit marks in wheel alloys. Permanon coatings withstand temperatures as hot as 300°C, keeping brake dust on the Permanon surface, protecting your rims from yellowing and pitting and making clean up a snap... a quick wipe down or rinse off is all that is necessary.
