

To whom this may concern,

Permanon Sanides 2 in 1

Bathroom, shower, kitchen and Toilet cleaner and disinfectant. Showers, sinks, baths, fittings; the products are used to clean, disinfect and protect. It is especially important to us that the Permanon products coat the cleaned surfaces and therefore protect the surface from dirt.

We have tested the Permanon Products Sanides and Allround Supershine for a season and used them for the complete cleaning of the installations. It was a tremendous relief to be able to work with only two products, which can be clearly distinguished from each other by their color.

We have a very big lime scale problem in Bodrum. In the past we had to use stronger products like lime scale removers or acids. Now it is enough to simply use Permanon Sanides. We have solved the lime scale problem

Since we are only using two products and the re-soiling is greatly reduced by the Permanon coatings, our personnel are now able to deal with other things that they never had time for in the past.

Permanon Allround Supershine

We have used this product for the entire basic cleaning.

Mirrors, windows, furniture made of wood, telephone, TV, floors as well as the polishing of surfaces.

As we mentioned above, we have only used two products for the entire cleaning process.

Due to the dispensing twin bottles these products are very easy to use and can be distinguished by their colors.

The cleaning of toilets and sanitary areas, fundamental cleaning, window cleaning and polishing cost us in 2004; ***YTL 2,500***

For the same cleaning in 2005 we spent only; ***YTL 1,200***

In addition to that our personnel now spend less time on cleaning, and can now do things which they never had time for in the past.
